
BattenVent™ by DCI

Installation instructions for Batten ventilation

It is important to follow each step within these instructions for proper installation of the CedarVent™ product. Any deviation from these instructions will void any warranty written or implied by DCI Products. If you need assistance with this product installation, please call DCI Products Monday through Friday 8am- 5 pm est. Our toll free number is 800-622-4455 or contact us via email info@dciproducts.com

Benefits

- Strong & cost effective solution
- Easy to cut, easy to install & non-corrosive
- Provides the necessary air for cedar to breathe behind the wall or roof surface
- Convenient 3' foot lengths for easy handling
- Can use power nail guns, will not crush

INSTALLATION:

After the roof/wall is prepared with a vapor barrier over the decking or plywood surface, install a strip of BattenVent™ around the perimeter¹ of the roof/wall surface.

Install BattenVent™ strips at the lower edge of the roof/wall parallel with the ground.

Continue installing pieces, butting each piece against the other until you reach the end.

FOR ROOFING:

Install the next parallel BattenVent™ up approximately 5" or at the next nailing line for your Batten product that is being installed. (The BattenVent™ installs at the nail lines for your particular roof Batten product)

FOR WALL:

Batten clapboards - Nail BattenVent™ over existing vertical studs when installing.

For Wall shakes - Nail BattenVent™ horizontal over plywood and install SmartRidge™ at the roof ridge for ventilation.

Your roof is now properly ventilated with intake and exhaust.
